INTRO

Let's be honest. Most meme tokens are a joke – and not the fun kind. They launch, they pump, insiders dump, and everyone's left holding bags. No utility. No reason to stay. Just vibes that expire after 48 hours.

But what if your meme token actually **did something**? What if buying it was the first move in a daily battle? What if holding it meant you were part of a team – and every 24 hours, your team fights to burn the other side into oblivion?

MemeClash takes the “us vs them” energy and turns it into an on-chain game. Two teams. Daily rounds. Real burns. The losing team's tokens get destroyed. The winning team gets scarcer.

Inspired by Stadium Finance (ETH/BSC), but rebuilt from scratch on BEAM's privacy-first blockchain. No centralized price feeds. No admin choosing winners. Just pure AMM math and smart contracts anyone can verify.

GO FUN YOURSELF

This isn't another boring token. It's a game. Pick a side, talk trash, strategize with your team, and watch the fireworks every 24 hours. Win or lose – you'll have a story to tell.

STRONGER TOGETHER

Your team is your army. The more people buy in, the bigger the war chest gets. Rally your crew. Coordinate buys. Form guilds. The team that fights hardest, wins.

BURN BABY BURN

Every round, the loser's tokens get sold and converted into winner tokens – then permanently destroyed. Supply only goes down. Scarcity only goes up. The math is on your side.

PLAYING DIRTY IS OK (BUT FOR EVERYONE)

WANT TO COORDINATE A MASSIVE BUY? DO IT.

THE OTHER TEAM CAN DO THE SAME.

WHY CHAD & GIGA?

Every great rivalry needs two legendary fighters. MemeClash chose the two biggest meme archetypes in crypto culture:

\$CHAD

The ultimate sigma energy. Chad doesn't follow trends – he IS the trend. Confident. Relentless. Built different. If you believe in raw dominance and never backing down, CHAD is your team.

\$GIGA

Pure meme chaos energy. Giga is the internet unleashed – unpredictable, unstoppable, and impossibly based. If you thrive on chaos and believe memes are the ultimate force, GIGA is your army.

ONCE BROTHERS. NOW MORTAL ENEMIES.
ONLY ONE CAN WIN EACH ROUND.

WHY BEAM?

Most battle games run on Ethereum or BSC where gas fees can eat your lunch. BEAM is different.

Privacy-first. Your transactions are confidential by default thanks to Mimblewimble + LelantusMW. Nobody knows how much you bought or when. No blockchain analysis. No front-running.

Dirt cheap fees. Transactions cost fractions of a cent. Play the game without worrying about gas eating your profits.

Built-in DEX. BEAM has a native AMM decentralized exchange. MemeClash reads pool data directly from the blockchain – no oracles, no third-party feeds, no trust required.

BATTLE MECHANICS

MemeClash runs on a simple but devastating loop. Every **24 hours (~1440 blocks)**, one team wins and the other gets burned.

1

BUY YOUR TEAM

Pick \$CHAD or \$GIGA. Buy with BEAM through the app. 95% of tokens go to your wallet. The other 5% goes to your team's battle treasury – the war chest.

2

WAIT FOR THE BELL

For 24 hours, both teams buy, strategize, and trash-talk. The more your team buys, the bigger the treasury and the more BEAM flows into your team's DEX pool.

3

ROUND ENDS

After 1440 blocks, the smart contract checks: which team's DEX pool attracted more BEAM? Not price – actual capital flow. More BEAM in = you win.

4

THE BURN

Loser's entire treasury gets sold on DEX for BEAM. That BEAM buys winner tokens. Those tokens get permanently destroyed. 85% burned, 10% FOMO fund, 5% caller reward.

5

NEXT ROUND

Anyone can start the next round. The cycle repeats every single day. No breaks. No mercy.

Battles can be triggered by **anyone**. No admin pressing a button. When a round ends and snapshots are submitted, any player can call the checkpoint. First one to do it earns **5% of all the BEAM** from the loser's treasury sale. Real money for one click.

THE SMART CONTRACT CHECKS THE DEX.
THE MATH DECIDES THE WINNER.
NO ADMINS. NO ORACLES. NO BS.

DRAW RULES

Sometimes both teams show up equally strong – or equally weak. If both pools had the same growth, or both shrank?

It's a DRAW. No burns happen. Both treasuries carry over to the next round intact. The stakes keep building.

ANTI-RUG

The 5% trade fee means every purchase grows the team's treasury automatically. Even if big holders dump, the next round is already funded. The game resets every 24 hours – there's always a reason to play.

THE BURN 🔥

This is the heart of MemeClash. When a round ends, the loser's treasury gets liquidated. Here's where that BEAM goes:

Loser's treasury → sold on DEX for BEAM → buys **winner's tokens** → **locked forever**. Permanently removed from circulation. Winner becomes scarcer. Loser funded it.

NO MINTING. SUPPLY ONLY GOES DOWN.
THE LONGER THE GAME RUNS,
THE SCARCER BOTH TOKENS BECOME.

TOKENS

\$CHAD ID: 187 Team 1 – The alpha fighter

\$GIGA ID: 186 Team 2 – The meme lord

BEAM ID: 0 Native currency – buy both tokens with this

FOMO ID: 174 Ecosystem token – gets 10% buyback each round

CONCLUSION

MemeClash asked a question: **what if meme tokens actually battled each other on-chain?**

Not hypothetically. Not with votes or vibes. But with real DEX liquidity, smart contract math, and permanent burns that make the winner scarcer forever.

The answer is up to you. Pick a team. Rally your friends. Buy your tokens. Watch the battle unfold every 24 hours. When the dust settles – make sure **YOUR** team is still standing.

VS

YOUR TEAM IS WINNING.
YOUR OPPONENT IS HELPLESS.
NOW, FINISH HIM!
